

Inventor:: Marc T. Sewell

Title:: Tool and Notation for Capturing and Communicating Enterprise and Technology Structures, Processes, Strategies, and Concepts

Application Number: 10/602,566

This is a response to the last action, Non-Final Rejection on 10/08/08, and a request that my appeal request and brief, for which I have paid and responded to all defective appeal brief notices, be honored and my in-person appeal request be accepted. It is futile to continue to respond to the examiner's actions and to pay fees – I believe I have satisfied the process, the claims are patentable, and the examiners have caused unnecessary delay through abuse of the process. This can all be resolved when I present to the appeal board. I have also submitted a plea to Andrew Faile and will be meeting with my Congressman. I am an individual inventor and the process for us, and the behavior of examiners, needs a detailed review. My experience should be a good case study.
